### Education

- Sep 2019 – **MSc, Robotics, Systems and Control, ETH Zürich**, Zürich, Switzerland.  
Sep 2021
  - Focusing on machine learning and algorithms for online decision making.
  - Scored a mark of **6.0/6.0** for my master's thesis and semester project with **Prof. Andreas Krause**.
- Oct 2014 – **BSc, Mechanical Engineering, Technion**, Haifa, Israel.  
Feb 2018
  - Formal class ranking: #3 out of 156 students; noted on the "President's list" (top 3%) 6 out of 7 consecutive semesters; **graduated summa cum laude**.
  - Awarded the **"KLA-Tencor" scholarship** and the **"Prof. M. Darlo" award**. These awards are given annually to a **single** student in class.

### Experience

- Aug 2021 – **Research Assistant, Learning & Adaptive Systems group**, Prof. Andreas Krause, Zürich.  
Present
  - Conducted research on the intersection of safety and Bayesian model-based reinforcement learning. Currently working towards paper publication at **ICLR 2022** machine learning conference.
- Mar 2021 – **Co-Founder, Obol**, Tel-Aviv.  
Present
  - Obol is a SaaS solution that helps enterprises optimize their multi-currency cash-flow.
  - **Secured \$750K** for our pre-seed fundraising.
  - Collaborated in forming Obol from its very early stages: i.e., characterizing the problem and its solution, identifying the product-market fit and compiling our vision into an actual idea for a product.
- Sep 2019 – **Principal Software Engineer, Robotemi**, Zürich.  
Jul 2021
  - Led the development of the product's new generation software stack, aiming for a more performant and scalable design and implementation.
  - Designed the system's architecture from scratch.
  - Coordinated the project's development timeline and plan to produce the required deliverables efficiently.
- Feb 2018 – **Software Engineer, Robotemi**, Tel-Aviv.  
Sep 2019
  - Developed visual navigation algorithms for an indoor robotic application; mainly in the fields of **computer vision** and **machine learning**.
  - Designed and implemented the visual human body identification and tracking module of the robot.

### Skills

- Software C++, Python, Linux, development and design of large scale software projects, TensorFlow and PyTorch, scikit-learn.
- Academic Machine learning, signal processing and control theory, optimization.
- Other Strong interpersonal relations that translate into fruitful collaborations with clients, employees, and colleagues. Presentation & public speaking.

### Other

- Citizenship Dual Portuguese and Israeli citizenship.
- Volunteering Participated in a team responsible for organizing the volunteering activities for a group of 45 volunteers assisting disadvantaged communities.
- Hobbies Recreational rock climber, climbed 200 meters high route in Wadi Rum, Jordan. Also, photographer and an avid book reader.
